

Product Information

The first choice for the environment: power one Accu plus

power one is committed to using environmentally friendly technologies for its rechargeable cell-type batteries and offers a complete range of products for all hearing aids with its p13 accu, p 312 accu, p 10 accu, p 675 accu models and innovative chargers.

High-performance rechargeable batteries that utilize Ni-MH technology are fast-charging and outclass all others when it comes to delivering utmost reliability and quality. All batteries are made at our manufacturing facility in Ellwangen / Germany and undergo rigorous safety and quality inspections.

The power one Card Charger is a convenient and portable quick-charging system shaped like a credit card that lets you charge one or two rechargeable hearing aid batteries. It can accommodate batteries of sizes p13, p312 or p10 depending on which battery insert adapter is used. The Card Charger itself is powered by a rechargeable lithium-polymer battery and needs no electrical outlet. Depending on their type, discharged cells can be fully charged in only two and a half hours.

Starting in the fall, the power one assortment will include the new power one **675Charger** for rechargeable nickel-metal hydride batteries of size 675. Just like the card charger, it can charge 1 or 2 cells within 5 hours. Partially charged batteries are automatically discharged before the recharging process begins. Doing so helps prolong the cells' life and enhance their power performance.

The worldwide patented pen charger now gives consumers a perfect portable charging system that they can take wherever they go. Awarded the 2006 iF Design Prize, this small and elegant pen charger is powered by 2 microbatteries (AAA) and needs no electrical outlet to charge power one cell-type batteries in the shortest possible time. The power one pen charger is available for hearing aid batteries of types p10 accu, p13 accu and p312 accu.
